11.1 Software Upgrade Instructions............................................ 66
CHAPTER 1: SERIAL NUMBER LOCATION

1.1 SERIAL NUMBER LOCATION

FRAME SERIAL NUMBER LOCATION

CONSOLE SERIAL NUMBER LOCATION
This treadmill is intended for commercial use. To ensure your safety and protect the equipment, read all instructions before operating the Matrix Treadmill.

Place the treadmill on a level and stable surface away from direct sunlight. The intense UV light can cause discoloration on the plastics. Locate your treadmill in an area with cool temperatures and low humidity. Please leave a clear zone behind the treadmill that is at least the width of the treadmill and at least 79” (2000 mm) long. This zone must be clear of any obstruction and provide the user a clear exit path from the machine. For ease of access, there should be an accessible space on both sides of the treadmill of at least 24” (600 mm) to allow a user access to the treadmill from either side. Do not place the treadmill in any area that will block any vent or air openings. The treadmill should not be located in a garage, covered patio, near water or outdoors.
2.2 READ AND SAVE THESE INSTRUCTIONS

This treadmill is intended for commercial use. To ensure your safety and protect the equipment, read all instructions before operating the MATRIX T5x-07 treadmill. When using an electrical product, basic precautions should always be followed including the following:

DANGER: To reduce the risk of electric shock: Always unplug this equipment from the electrical outlet immediately after using and before cleaning.

WARNING: To reduce the risk of burns, fire, electrical shock or injury to persons that may be associated with using this product.

An appliance should never be left unattended when plugged in. Unplug from the outlet when not in use and before putting on or taking off parts.

This product must be used for its intended purpose described in this service manual. Do not use other attachments that are not recommended by the manufacturer. Attachments may cause injury.

To prevent electrical shock, never drop or insert any object into any opening.

Do not remove the console covers. Service should only be done by an authorized service technician.

Never operate the treadmill with the air opening blocked. Keep the air opening clear, free of lint and hair.

Never operate product if it has a damaged cord or plug, if it is working improperly, if it has been damaged, or immersed in water.

Do not carry this unit by its supply cord or use the cord as a handle.

Keep any power cord away from heated surfaces.

Close supervision is necessary when the treadmill is used by or near children or disabled persons.

Do not use outdoors.

Do not operate where aerosol (spray) products are being used or when oxygen is being administered.

To disconnect, turn all controls to the off position, then remove plug from the outlet.

Connect this treadmill to properly grounded outlets only.

CAUTION: If you experience chest pain, nausea, dizziness or shortness of breath, STOP exercising immediately and consult a physician before continuing.

- Do not use the equipment in any way other than designed or intended by the manufacturer. It is imperative that all Matrix Fitness System's equipment is used properly to avoid injury.
- Keep hands and feet clear of moving parts at all times to avoid injury.
- Unsupervised children must be kept away from this equipment.
- Do not wear loose clothing while on equipment.
For your safety and to ensure good treadmill performance, the ground on this circuit must be non-looped. Please refer to NEC articles 210-21 and 210-23. Your treadmill is provided with a power cord with a plug listed below and requires the listed outlet. Any alterations of this power cord could void all warranties of this product.

**2.3 ELECTRICAL REQUIREMENTS**

All Matrix treadmills require the use of a 20 amp "dedicated circuit" with a non-looped (isolated) neutral / ground for the power requirement. Quite simply this means that each outlet you plug your treadmill into should not have anything else running on that same circuit. The easiest way to verify this is to locate the main circuit breaker box, and turn off the breaker(s) one at a time. Once a breaker has been turned off, the only thing that should not have power to it is the treadmill. No lamps, vending machines, fans, sound systems, or any other item should lose power when you perform this test.

Non-looped (isolated) neutral / grounding means that each circuit must have an individual neutral / ground connection coming from it, and terminating at an approved earth ground. You cannot "jumper" a single neutral / ground from one circuit to the next.

In addition to the dedicated circuit requirement, the proper gauge wire must be used from the circuit breaker box, to each outlet that will have the maximum number of units running off of it. If the distance from the circuit breaker box, to each outlet, is 100 feet or less, then 12 gauge wire may be used. For any distance greater than 100 feet from the circuit breaker box to the outlet, 10 gauge wire must be used.
3.1 RECOMMENDED CLEANING TIPS

In order to maximize life span, and minimize down time, all Matrix Fitness Equipment requires regularly scheduled cleaning.

YOU WILL NEED:
- Mild dish soap and water mixture in a spray bottle (10:1 water to soap ratio).
- Lint free 100% cotton cleaning cloths or Micro fiber cleaning cloths.
- Vacuum / Shop Vac with extendable hose and soft brush attachment.
- Corrosion Block (available from Matrix - part # ZMS4001374).

DAILY:
1. Wipe down the unit after each use with a mild dish soap and water mixture. NOTE: Spray the soap / water mixture onto the cloth. NEVER spray directly onto the equipment. We recommend that you do NOT allow customers to use spray bottles to clean the equipment. If the cleaner is sprayed directly on the equipment or over spray is present, it may cause your equipment to rust and / or cause damage to console overlays.

WEEKLY:
1. With a clean dry 100% lint free cloth and water / soap mixture, wipe any dust and dirt from the sides of the running deck between the running belt and side rails.
2. With a clean dry 100% lint free cloth and water / soap mixture, wipe the dust from the top of the motor cover.
3. With a clean dry 100% lint free cloth and water / soap mixture, wipe down the entire console area including the hand grips and hand rails.

MONTHLY:
1. Vacuum under and around the Treadmill. If you need to move it, unplug the unit first.
2. Vacuum the air vent on the front of the unit.
3. Apply Corrosion Block to the metal part of the iPod cable.

QUARTERLY:
1. Unplug the unit. Remove the motor cover. Use a vacuum with a soft brush extension, vacuum the dust and dirt from the motor, MCB, fan, and surrounding areas. Be careful not to hit any of the wire connections.

3.2 CHECK FOR DAMAGED PARTS

DO NOT use any equipment that is damaged or has worn or broken parts. Use only replacement parts supplied by Matrix Fitness Systems.

MAINTAIN LABELS AND NAMEPLATES. Do not remove labels for any reason. They contain important information. If unreadable or missing, contact Matrix Fitness Systems for a replacement at 866-693-4863 or www.matrixfitness.com.

MAINTAIN ALL EQUIPMENT. Preventative maintenance is the key to smoothly operating equipment. Equipment needs to be inspected at regular intervals. Defective components must be kept out of use until they are repaired. Ensure that any person(s) making adjustments or performing maintenance or repair of any kind is qualified to do so. Matrix Fitness Systems will provide service and maintenance training at our corporate facility upon request or in the field if proper arrangements are made.
3.3 CARE AND MAINTENANCE INSTRUCTIONS

In order to maximize life span, and minimize down time, all Matrix Fitness System’s equipment requires regular cleaning, and maintenance items performed on a scheduled basis. This section contains detailed instructions on how to perform these items, the frequency of which they should be done, and a check list to sign off on each time service is completed for a specific machine. Some basic tools and supplies will be necessary to perform these tasks which include (but may not be limited to):

* Metric Allen wrenches  
* #2 Phillips head screwdriver  
* Adjustable wrench  
* Lint free cleaning cloths  
* Teflon based spray lubricant such as "Super Lube" or other Matrix approved products.  
* Vacuum cleaner with an extendable hose and crevasse tool attachment.

You may periodically see addendums to this document, as the Matrix Technical Support Team identifies items that require specific attention, the latest version will always be available on the Matrix web site at www.matrixfitness.com.

DAILY MAINTENANCE ITEMS

1) Clean the entire machine using water and mild detergent such as "Simple Green", or other Matrix approved solutions (cleaning agents MUST be alcohol and ammonia free).
2) Check the emergency stop button and cord for proper operation.
3) Check the power cord for damage, and make sure that the power cord retainer is installed and securely fastened.

MONTHLY MAINTENANCE ITEMS

1) Check the alignment of the running belt (see Section 3.5).
2) Check the tension of the running belt (see Section 3.5).

**NOTE:** If there is any damage to the running belt or deck, replace with new. If you are replacing (or flipping) a deck, it should always be accompanied by a new belt.

QUARTERLY MAINTENANCE ITEMS

1) Unplug the unit. Remove the motor cover and vacuum the entire inside area of the machine being careful not to bump any wires or connections loose.
2) While the motor cover is off, inspect the drive belt for visible wear. Replace if any signs of damage.
3) While the motor cover is off, start the unit and raise incline settings to maximum height. Turn the power switch off at the front of the machine to prevent it from lowering accidentally. Lubricate incline motor Acme screw (Matrix recommends Super Lube brand grease with PTFE additive).

BI-ANNUAL MAINTENANCE ITEMS

1) Remove wax build up from the front and rear rollers of the machine.
2) Inspect the underside of the running belt for damage, check for cracking or glazed surfaces.
3) During normal operating conditions, the running belt replacement and deck service should be done every 25,000 miles.
### 3.4 AUTO CALIBRATION INSTRUCTIONS

Run Auto Calibration to calibrate incline after assembly and after replacing any electronic component.

**AUTO CALIBRATION PROCEDURE:**

1) Press and hold the INCLINE DOWN and SPEED DOWN keys for three seconds until Manager Mode appears on the middle LED display.

2) Press any UP arrow key and Engineering Mode will appear on the display.

3) Press ENTER once Engineering Mode is displayed.

4) Scroll between programs in the Engineering Mode using any UP or DOWN arrow key until Auto Calibration appears on the middle LED display.

5) Press ENTER once Auto Calibration is displayed, you should not be standing on the running belt.

6) After completion, the display will state whether the Auto Calibration passed or failed.

### 3.5 ALIGNING AND TENSIONING THE RUNNING BELT

After placing the treadmill in the position it will be used, the belt must be checked for proper tension and centering. The belt may need to be adjusted after the first 2 hours of use. Temperature, humidity, and use cause the belt to stretch at different rates. If the belt starts to slip when a user is on it, be sure to follow the directions below.

**STEP 1:** Locate the two hex head bolts on the rear of the treadmill. The bolts are located at each end of the frame at the back of the treadmill. These bolts adjust the rear roller. Do not adjust until the treadmill is on. This will prevent over tightening of one side.

**STEP 2:** The belt should have equal distance on either side between the frame. If the belt is touching one side, do not start the treadmill. Turn the bolts counter clockwise approximately one full turn on each side. Manually center the belt by pushing the belt from side to side. Tighten the bolts the same amount as when the user loosened them, approximately one full turn. Inspect the belt for damage.

**STEP 3:** While the treadmill is running at 3 mph, observe the belt position. If it is moving to the right, tighten the right bolt by turning it clockwise 1/4 turn, and loosen the left bolt 1/4 turn. If it is moving to the left, tighten the left bolt by turning it clockwise 1/4 turn and loosen the right 1/4 turn. Repeat Step 3 until the belt remains centered for several minutes.

**STEP 4:** Check the tension of the belt. Set the treadmill speed at 6 mph. While walking in the center of the belt, stomp down hard with one foot. You should be able to make the belt hesitate slightly. If you cannot make it hesitate, the tension is too tight. Loosen the rear roller bolts by turning them counter clockwise by 1/4 turn at a time. Re-do the stomp test after each turn and continue to loosen until the belt hesitates. If the belt stops while doing a stomp test, the belt is too loose. Tighten the rear roller bolts by turning them clockwise by 1/4 turn at a time. Re-do the stomp test after each turn and continue to tighten the belt until the belt only hesitates.
WORKOUT KEYS: Simple program view and selection buttons. Press the Fitness Test button to cycle through available tests.

QUICK START / GO: One touch Start and Quick Start.

ENTER: To confirm each program setting.

UP / DOWN INCLINE: Easy information and incline selection.

UP / DOWN SPEED: Easy information and speed selection.

UP / DOWN TIME: Easy information and time adjustment.

EMERGENCY STOP / IMMOBILIZATION: To stop all functions and immobilize the unit. The emergency stop on this treadmill must be returned to its original position in order to allow normal operation of the unit.

STOP: Ends workout and shows workout summary data.

PAUSE: Pauses workout. Pause duration can be set in Manager Mode.

NUMBER KEYPAD: Workout data input for workout setup. Speed adjustment during workout.

COOL DOWN: Puts treadmill into Cool Down mode. Cool Down time is dependent on the length of the workout. Workouts 19 minutes and shorter will have a cool down length of 2 minutes. Workouts 20 minutes and longer will have a cool down length of 5 minutes.

FAN: Allows for fan speed selection (fan has 3 operating speeds).

TOGGLE DISPLAY: Cycles between 4 rows of workout information displayed in LED window. The console will automatically cycle between the workout information if the Toggle Display button is pushed and held down for 3 seconds.

LANGUAGE: Select language.
**4.2 MANUAL WORKOUT OPERATION**

**QUICK START OPERATION**

Press the GO or QUICK START button(s) and the treadmill will enter into a manual mode of operation. All energy expenditure values will be calculated using the default weight measurement.

**MANUAL WORKOUT OPERATION**

Manual is a workout that allows you to manually adjust the speed and incline values at anytime. The manual workout also contains a setup screen which allows you to input your weight to help calculate a more accurate caloric burn rate.

To enter into this Manual Workout:

1) Choose MANUAL WORKOUT by selecting the manual workout button and press ENTER.
2) Enter the desired workout length using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
3) Enter user weight (user weight is used to calculate the caloric expenditure value—providing an accurate weight helps to ensure an accurate caloric expenditure rating for each user) using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
4) Enter the desired initial incline value using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
5) Enter the desired start speed using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
6) Press GO or QUICK START to begin workout.

**4.3 OPERATING LEVEL BASED PROGRAMS**

Your Matrix T5x-07 Treadmill offers a variety of level-based workouts to challenge users of all fitness levels. The following information will briefly explain the workouts and how to program the treadmill for each workout selection.

**ROLLING HILLS WORKOUT OPERATION**

Rolling Hills is a level based workout that automatically adjusts the incline value to simulate walking or running up hills.

1) Choose ROLLING HILLS by selecting the rolling hills workout button and press ENTER.
2) Enter the desired intensity using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
3) Enter the desired workout length using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
4) Enter user weight (user weight is used to calculate the caloric expenditure value, providing an accurate weight helps to ensure an accurate caloric expenditure rating for each user) using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
5) Press GO or QUICK START to begin the workout.

**FAT BURN WORKOUT OPERATION**

Fat Burn is a level-based workout that is designed to help users burn fat through various incline changes.

1) Choose FAT BURN by selecting the fat burn workout button and press ENTER.
2) Enter the desired intensity level using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
3) Enter the desired workout length using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
4) Enter user weight (user weight is used to calculate the caloric expenditure value, providing an accurate weight helps to ensure an accurate caloric expenditure rating for each user) using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
5) Press GO or QUICK START to begin the workout.
4.4 HEART RATE CONTROL WORKOUT OPERATION

Your Matrix T5x-07 Treadmill offers a heart rate control workout mode. The heart rate control workout mode allows the user to program their desired heart rate zone and maximum allowable incline and the treadmill will automatically adjust the incline based upon the user's heart rate. The heart rate zone is calculated using the following equation: \[(220 - \text{Age}) \times \% = \text{target heart rate zone}\]. The user must wear a telemetric heart rate monitor or continually hold onto the contact heart rate grips for his workout.

1) Choose HEART RATE by selecting the heart rate workout button and press ENTER.
2) Enter incline using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
3) Enter age using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
4) Enter the desired percent of maximum heart rate using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
5) Enter the desired time using the ARROW KEYS or NUMBER KEYPAD and press ENTER.
6) Enter user weight (user weight is used to calculate the caloric expenditure value, providing an accurate weight helps to ensure an accurate caloric expenditure rating for each user) using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
7) Press GO or QUICK START to begin the workout.

4.5 FITNESS TEST WORKOUT OPERATION

Your Matrix T5x-07 Treadmill offers a variety of fitness tests - the Gerkin Firefighter Protocol, the Wellness Fitness Initiative (WFI), the Army, Navy, USMC, and USAF as well as the Physical Efficiency Battery (PEB).

The Gerkin Protocol was developed by Dr. Richard Gerkin of the Phoenix (Arizona) Fire Department. It is a sub-maximal graded treadmill evaluation used by many fire departments across the United States to assess the physical condition of the firefighters. The test requires constant monitoring of the user's heart rate so the use of a telemetric chest strap is highly encouraged. The workout operates as follows:

**WARM UP:** The warm up is 3 minutes long and runs at 3.0 mph (4.8 kph) and 0% incline.

**STAGE 1:** At the 3 minute mark, the treadmill will gradually increase speed to 4.5 mph (7.2 kph). The actual test begins at 4.5 mph (7.2 kph).

**STAGE 2:** After one minute, the treadmill incline will increase to 2%.

**STAGE 3:** After one minute, the treadmill speed increases to 5.0 mph (8.0 kph).

**STAGES 4 THROUGH 11:** After every odd minute the treadmill incline will increase by 2%. After every even minute the treadmill speed will increase by 0.5 mph (0.8 kph). Once the user's heart rate exceeds the target heart rate (85% of maximum as determined by the equation \[(220 - \text{Age}) \times \% = \text{target heart rate zone}\]), the individual continues the evaluation for an additional 15 seconds. During the 15 second period, the evaluation remains at the stage where the target heart rate is exceeded, without any change to speed or incline. If the heart rate does not return to or below the target heart rate, the evaluation ends and the final evaluation stage is recorded. If the heart rate returns to or below the target heart rate, the program continues at the point where it would have been had the program not stabilized for 15 seconds.

**TEST COMPLETION:** The test is completed when user's heart rate exceeds the target for more than 15 seconds or when the user completes all 11 stages, whichever occurs first. The treadmill will enter a cool down cycle for 3 minutes at 3.0 mph (4.8 kph), 0% incline.

1) Choose the Gerkin Test by pressing the FITNESS TEST workout button until Gerkin is shown in the message window and press ENTER.
2) Enter user's age using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
3) The message window will display your target heart rate based upon your age and the target heart rate zone of 85%.
4) Select gender using the ARROW KEYS and press ENTER.
5) Enter user weight (user weight is used to calculate the caloric expenditure value, providing an accurate weight helps to ensure an accurate caloric expenditure rating for each user) using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
6) The message window will notify the user that the start speed is 3.0 mph (4.8 kph) and 0% incline during the warm-up.
7) Press GO or QUICK START to begin workout.
The Military Test programs and the Physical Efficiency Battery (PEB) provide workouts of a preset distance. These distances are established by the various branches of the Military with the objective of each test to complete the distance as quickly as possible. At the completion of the test, a time-based score as defined by the respective Military branch will be shown on the console.

1) Choose your desired Military test by pressing the FITNESS TEST WORKOUT button until your desired branch test is shown in the message window and press enter.
2) Enter user’s age using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
3) Select gender using the ARROW KEYS and press ENTER.
4) Enter user weight (user weight is used to calculate the caloric expenditure value, providing an accurate weight helps to ensure an accurate caloric expenditure rating for each user) using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
5) Enter the desired start speed using the ARROW KEYS or the NUMBER KEYPAD and press ENTER.
6) Press GO or QUICK START to begin the workout.
5.1 USING MANAGER MODE

1) To enter Manager Mode, press & hold INCLINE DOWN and SPEED DOWN at the same time for 3-5 seconds until Manager Mode appears on the display.
2) To enter the Manager Mode, press ENTER once Manager Mode appears on the display.
3) To scroll between programs in the Manager Mode, press any UP or DOWN arrow key.
4) Press ENTER to modify the program settings once displayed.
5) Press any UP or DOWN arrow key to change value.
6) Once program setting is correct, press ENTER to save.
7) Press the EMERGENCY STOP to exit Manager Mode.

</tbody>
</table>
| Audio Source         | OFF     | OFF / TV / PCTV / REMOTE TV | N/A | a. Off – no TV (keypad will not operate)  
b. TV – All normal MYE TVs  
c. PCTV – All PCTVs (net based TV).  
d. Remote TV – Wall mounted TVs with 900MHz receiver.                                                                 |
| Volume Control       | OFF     | A. INPUT DEFAULT :15  
B. MAX DEFAULT :32  
C. OUTPUT DEFAULT :13 | N/A | Controls the default TV volume for entertainment wired through the C-Safe port.  
a. Input Default (DF : 15 / Range : 1 ~ 15)  
b. Max Default (DF : 32 / Range : 1 ~ 32)  
c. Output Default (DF : 13 / Range : 1 ~ Max)  
Remote TV support a / b / c item. TV and PCTV only support c item. |
| AM System            | RF RADIO | N/A     |         |      | To select AM output device by WiFi or RF Radio.                                                                                               |
| ERP Time (Sleep time)| OFF     | OFF OR 0:01(MINUTES)~4:00(HOURS) | N/A | If there is no use of the machine over a period of time, the console LEDs will turn off (go into sleep mode). |

Due to the limited LED characters, 2 layers are used to enter the serial number. First Layer:
- PPPP V
- V is the version. If the version is A, just leave this blank.
Second Layer
- YY MM nnnn.
- YY is the year (11, 12).
- MM is the month (e.g. 08, 09, 10).
- nnnn is the actual serial number.
Use the UP / DOWN LEVEL keys to navigate the layers and the number keys to input the serial number. The product name is dependent on the Machine Type setting. For example, the console is TM519 with ver. A and the manufactured date is 2012.09 with 18765. The frame is TMS01 with ver. E and the manufactured date is 2012.09 with 12345. Their serial numbers are: Console SN: TM519 1st layer, 120918765 2nd layer. Frame SN: TMS01E 1st layer, 120912345 2nd layer.
7.1 USING SERVICE MODE

1. To enter Service Mode, hold the INCLINE DOWN and SPEED DOWN keys for three seconds until Manager Mode appears on the middle LED display.

2. Press any DOWN arrow key and Service Mode will appear on the display.

3. Press ENTER once Service Mode is displayed.

4. To scroll between programs in the Service Mode, press any UP or DOWN arrow key.

5. Press ENTER to modify the program settings once displayed.

6. Press any UP or DOWN arrow key to see value.

7. Press the EMERGENCY STOP to exit Service Mode.

8.3 MCB WIRING

TB1 - AC Motor Cable Socket
TB2 - Input Power Cable Socket
J9 - Inside Fan Cable Socket
J10 - Digital Communication Cable Socket
J12 - Elevation Motor Cable Socket
J16 - External Fan Cable Socket
8.4 0140 / 01A0 / 01A2 ERROR TROUBLESHOOTING

ERROR MESSAGES 0140 / 01A0 / 01A2

1) SYMPTOM:
   a. 0140 - Incline motor operation failed.
   b. 01A0 - Incline motor disconnected.
   c. 01A2 - Incline motor is detected in the reverse of the position indicated by the potentiometer.

2) SOLUTION
   a. Check the connection of the incline motor cable at the MCB.
   b. Run auto calibration (See Section 3.4).
   c. If auto calibration fails, re-enter Engineering Mode and scroll until Elevation Minimum is displayed, then press ENTER.
      - Check the MCB LEDs. If LED DOWN (Figure A) has no light, check the console cable connections at the console and MCB.
      - Check the console or cable as needed. If LED DOWN has a light, replace the incline motor.
   d. If the incline motor does not resolve the issue, replace the MCB.

8.5 01A3 ERROR TROUBLESHOOTING

ERROR MESSAGE 01A3

1) SYMPTOM:
   a. Motor is disconnected.

2) SOLUTION:
   a. Check the connection of the motor cable at the MCB (Figure A).
   b. Check to see if the MCB LED DSP1 (MCU) is lit (Figure B).
   c. If LED DSP1 is blinking, the motor should be replaced.
   d. If LED DSP1 is a solid light, replace the motor.
   e. If LED DSP1 is not lit, replace the MCB.
8.6 01A8 / 02B6 / 02B7 / 02B8 ERROR TROUBLESHOOTING

ERROR MESSAGE 01A8 / 02B6 / 02B7 / 02B8

1) SYMPTOM:
   a. 01AB - Motor over current.
   b. 02B6 - Speed up is overcurrent.
   c. 02B7 - Speed down is overcurrent.
   d. 02B8 - Running status is overcurrent.

2) SOLUTION:
   a. Check the condition of the running deck and belt. Replace the belt and flip or replace the running deck as needed.
   b. Replace the MCB.

8.7 01AD ERROR TROUBLESHOOTING

ERROR MESSAGE 0X029F

1) SYMPTOM:
   a. Motor over temperature.

2) SOLUTION:
   a. Check the connection of the motor cable at the MCB (Figure A).
   b. Use a multi-meter to check the motor wire circuit. Set the multi-meter to Ohms and place both terminals on the blue wires of the motor cable (Figure B). There should be an Ohm reading of 0. If there is an Ohm reading above 0, replace the motor. If the Ohm reading is 0, replace the MCB.
8.8 02AD ERROR TROUBLESHOOTING

ERROR MESSAGE 02AD

1) SYMPTOM:
   a. MCB is over temperature.

2) SOLUTION:
   a. Check to see that both fans are operating (there is a fan mounted to the MCB itself as well as an external fan). Also check the connection of the fans at the MCB (Figure A).
   b. If the fans are running correctly, replace the MCB.

   ![Figure A]

8.9 02B2 ERROR TROUBLESHOOTING

ERROR MESSAGE 02B2

1) SYMPTOM:
   a. The emergency circuit on the interface board is active.

2) SOLUTION:
   a. Check the connection of the safety key (emergency stop) switch (Figure A). If the switch is always open or shorted out, replace the switch.
   b. If the emergency stop does not resolve the issue, replace the console.
8.10 02B9 / 02BA / 02BD ERROR TROUBLESHOOTING

ERROR MESSAGE 02B9 / 02BA / 02BD

1) SYMPTOM:
   a. 02B9 - The inner memory IC data write error.
   b. 02BA - The inner memory IC data read error.
   c. 02BD - Inverter hardware interrupt error.

2) SOLUTION:
   a. Check LED DSP1 (MCU) on the MCB (Figure A).
   b. If this LED is blinking, replace the console.
   c. If this LED is a constant light, replace the MCB.
   d. If this LED is not lit at all, check the power to the MCB.

FIGURE A

8.11 04A0 ERROR TROUBLESHOOTING

ERROR MESSAGE 04A0

1) SYMPTOM:
   a. No communication received.

2) SOLUTION:
   a. If the display is giving an 04A0 error, LED DSP2 (RS485) should be off (Figure A). If this light is not on and an 04A0 error is present, replace the console.
   b. Check the connection of the console communication cable at both the console and the MCB.
   c. Replace the console communication cable.
   d. Replace the MCB.

FIGURE A
8.12 TROUBLESHOOTING - NO POWER TO THE CONSOLE

POWER SWITCH IS ON, BUT THE CONSOLE HAS NO DISPLAY

1) SYMPTOM:
   a. The unit is not getting power from the outlet.
   b. The MCB is not getting power from the power receptacle.
   c. The power switch and MCB LEDs are lit, but there is no power to the console.

2) SOLUTION:
   a. Check to see if the power switch is lit. If it is not, plug the power cord into a known working outlet and re-test.
      - If the power switch is still not lit, replace the power switch, receptacle, and / or the power cord.
   b. Remove the motor cover and check to see if LED +12V (DSP4) is lit on the MCB (Figure A).
      - If the LED +12V is not lit, check the incoming AC voltage to the MCB.
      - Replace the MCB if all power components are OK, and there is AC volts to the MCB.
   c. If LED +12V is lit, check the connection of the console communication cable.
      - If the console communication cable is connected correctly, please check the console cable for +12VDC (Figure B).
      - If there is not power through the console cable to the console UCB, replace the console communication cable.
      - If there is power through the console cable to the console UCB, but there is still no power on the console, replace the console.

![Figure A](image1.png)
![Figure B](image2.png)
8.13 TROUBLESHOOTING - HEART RATE ISSUES

HEART RATE ISSUES

1) SYMPTOM:
   a. No heart rate.
   b. High heart rate.

2) SOLUTION:
   a. With a multi meter set for DC Voltage, place one prong of the multi meter on each of the HR plates on the handlebar (Figure A). A correctly connected HR grip will have a DC Voltage reading of between 0.5 and 2.0. If this reading is correct, skip to Step b.
   - If the reading is not correct, remove the screws holding the 2 halves of the HR grip together and check the connection of the HR grip wiring to the grips (Figure B). Replace the grips if any damage is seen to the plates.
   - Remove the console to expose the HR board.
   - Check the connection of the HR grip wiring to the 6 pin Y cable attached to one side of the HR board. Use a multi meter set for ohms to verify the continuity of these wires. If the ohm reading is more than 1 (or not there at all), replace the HR grip wiring (this will require replacing the HR handlebar). If the ohm reading is correct, your issue is not with the HR grip / HR wire portion of the HR system.
   - Perform a continuity test on the treadmill console (see Service Bulletin - Continuity Test on Matrix Treadmills).
   - Verify the HR board ground wire. With a multi meter set for ohms, place one prong on the HR board ground wire, and the other on the console ground screw. You should get a resistance reading of 1 or less. If you get a reading over 1 (or none at all), replace the HR board.
   - Check the continuity of the wire that goes from the HR board to the Translator Board. With a multi meter set for ohms, place one prong on the 3 pin wire connecting to the HR board (Figure C) and the other on where this wire connects to the Translator Board (Figure D). If you get a reading of over 1 (or no reading at all), replace this wire.
   - Check the connection of the wire that goes from the Translator Board to the UCB. Replace this wire if needed.
   - If all wiring checks out good and the unit is still having HR issues, replace the HR board.
   - If the HR board does not resolve the issue, replace the UCB.
8.14 TROUBLESHOOTING - SPEED SHOWN IS SLOWER THAN BELT SPEED

SCREEN SHOWS A HIGH SPEED, BUT THE BELT MOVING SLOWER THAN SHOWN

1) SYMPTOM:
   a. The unit speed does not match the console display.

2) SOLUTION:
   a. Perform an amp draw on the incoming power (see Field Work Instruction - Running an Amp Draw on Matrix Treadmills).
   b. If the amp draw is too high regardless if a user is present or not, the issue is likely with the drive system (drive belt or motor).
      - Make sure that there is enough tension from the idler on the drive belt so that it is not slipping.
      - Check the rotation of the motor to find any dead spots or a wobble in the motor axle.
      - Check the condition of the drive belt. Look for any wear or tears. Replace as needed.
   c. If the amp draw is too high with a user, the issue is likely with the deck / running belt.
      - Inspect the running deck for sticky or worn spots. If any wear is seen, flip the deck (it is waxed on both sides). A new running belt should be installed any time a running deck is flipped.
      - Replace the running belt.
9.1 MOTOR COVER AND LOWER SHROUD REMOVAL

1) The motor cover is split into two pieces (called the motor cover and lower shroud.
2) Remove the 2 screws holding motor cover to the frame (Figure A).
3) Pull up on the rear of the motor cover to release the Velcro, and remove the motor cover (Figure B).

4) Remove the 4 screws holding the lower shroud to the frame (Figure C).
5) Figure D shows a unit with both the motor cover and lower shroud removed.
9.2 REAR ROLLER REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove one of the end caps using a Phillips screwdriver (Figure A).
3) Remove both roller adjustment screws using an 8 mm Allen wrench (Figure B).
4) Remove the roller from the running belt (Figures C & D).
5) Reverse Steps 1-4 to install a new rear roller.
6) Tension the running belt as outlined in Section 3.5.
9.3 DECK REPLACEMENT

1) Remove the motor cover as outlined in Section 9.1.
2) Remove the rear roller as outlined in Section 9.2.
3) Remove the four deck screws using a 5 mm Allen wrench (Figure A).

4) Remove the deck from the running belt (Figures B & C).

5) Reverse Steps 1-4 to install a new running deck. **NOTE**: The running deck is waxed on both sides so the opposite side surface may be usable. New running deck surfaces must ALWAYS be matched to a new running belt.
6) Tension the running belt as outlined in Section 3.5.
9.4 DECK CUSHION REPLACEMENT

1) Remove the deck as outlined in Section 9.3.
2) Holding the bolt with a 5 mm Allen wrench, loosen the nut with a 13 mm socket (Figure A & B).

3) For the rear cushion, hold the cushion and remove the 13 mm nut (Figure C).

4) Reverse Steps 1-3 to install new deck cushions.
5) Tension the running belt as outlined in Section 3.5.
9.5 FRONT ROLLER REPLACEMENT

1) Remove the motor cover as outlined in Section 9.1.
2) Using a hook or loop of wire, remove the spring from the drive belt tensioner. The tensioner should now pivot away from the drive belt (Figures A & B).

3) Remove the front roller mounting screws using an 8 mm Allen wrench (Figures C & D).
4) Remove the drive belt from the front roller and remove the roller from the running belt (Figure E).

5) Reverse Steps 1-4 to install a new front roller.
6) Tension the running belt as outlined in Section 3.5.
9.6 RUNNING BELT REMOVAL

1) Remove the motor cover as outlined in Section 9.1.
2) Remove the rear roller as outlined in Section 9.2.
3) Remove the deck as outlined in Section 9.3.
4) Remove the front roller as outlined in Section 9.5.
5) Remove the running belt and replace with a new belt (Figures A & B). **NOTE:** New running belts should ALWAYS be installed on a new deck surface (deck should either be flipped or replaced to gain a new surface).

6) Tension the running belt as outlined in Section 3.5.
9.7 SIDE RAIL REPLACEMENT

1) Remove the end cap using a Phillips screwdriver (Figure A).
2) Loosen the four screws under the frame using a 5 mm Allen wrench (Figure B).
3) Slide the rail off the back of the treadmill (Figures C & D).
4) Reverse Steps 1-3 to install a new side rail.
5) After reinstalling the side rail, make sure end cap is on first before tightening screws for proper gap spacing. **NOTE:** Be careful not to overtighten the screws, or they will poke through the top of the side rail.
9.8 MOTOR CONTROL BOARD (MCB) REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the motor cover as outlined in Section 9.1.
3) Cut any wire ties that are secured to the MCB panel.
4) Disconnect wires from the MCB - five total connections.
5) Remove two MCB mounting screws using a Phillips head screwdriver (Figures C & D).

6) Reverse Steps 1-5 to install a new MCB. Be sure to re-connect the 5 wires removed from the old MCB in Step 4 (Figure C). **NOTE**: The speed sensor wire from the motor is no longer used and can be tie strapped to a bracket.
7) Auto Calibration must ALWAYS be run after replacing the MCB (see Section 3.4).
9.9 MOTOR REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the motor cover as outlined in Section 9.1.
3) Release the drive belt tensioner as outlined in Section 9.5.
4) Disconnect the motor power cable from the MCB (Figure A).
5) Use an 8 mm Allen wrench to remove the four motor mounting screws (Figure B).

6) Lift the motor away from the treadmill (Figure C).
7) Reverse Steps 1-6 to install a new motor. **NOTE:** When reinstalling the motor, make sure the red vibration pad is in place (Figure D).
**NOTE:** The wire from the speed sensor on the motor is no longer used and can be tie strapped to the MCB bracket.
8) Auto Calibration must ALWAYS be run when installing a new motor. (see Section 3.4)
9.10 DRIVE BELT REPLACEMENT

1) Remove the motor cover as outlined in Section 9.1.
2) Release the drive belt tensioner from drive belt as outlined in Section 9.5.
3) Remove the front roller screw on the drive belt side and loosen the screw on the opposite side (Figure A).

4) Lift the roller and remove the old drive belt (Figure B).

5) After installing a new belt, check it for correct alignment to the motor pulley before setting the tensioner in place.
9.11 INCLINE MOTOR REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Lift the treadmill and support it so that the front wheels are off the floor, or the unit may be tipped on its side (Figure A).

3) Remove the clip from the pin attaching the incline motor to the rack (Figure B & C).

FIGURE A

FIGURE B

FIGURE C
4) Disconnect the incline motor power cable from the MCB (Figure D).
5) Disconnect the pin from the incline motor (Figure E).

6) Lift the incline motor away from the treadmill (Figure F).

7) Reverse Steps 1-6 to install a new incline motor. **NOTE:** When installing the new incline motor, make sure to replace the white washers at the top and bottom (Figure G).

8) Auto Calibration must ALWAYS be run after replacing the incline motor (see Section 3.4).
9.12 CONSOLE REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the back cover of the console (Figure A).
3) Disconnect the console cable connectors (Figure B).

4) Remove the six 6 mm screws from underneath the console. There are arrows stamped in the plastic at the proper openings (Figure C).
5) Move the console away from the console frame (Figure D).
6) Reverse Steps 1-5 to install a new console.

7) Auto Calibration must ALWAYS be run after replacing the console (see Section 3.4).
9.13 CONSOLE MAST ARM REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the console as outlined in Section 9.12.
3) Take off the cup holder from the right side of the treadmill (Figure A).
4) Use a 6 mm Allen wrench to remove one screw and take off the plastic hand rail (Figure B).

5) Remove the 5 Phillips screws and remove the right side upper plastic cover (Figures C, D, & E).

6) Cut the wire ties and begin to un-thread the console cable (Figures F & G).
7) Remove the screws holding the console frame to the mast arms with a 6 mm Allen wrench in the openings with arrows (Figure H).
8) Lift the frame from the mast arms and set it aside (Figure I).

9) Use a 6 mm Allen wrench to remove the lower mast arm mounting screws (Figure J).
10) Pull the mast arm from the side of the machine (Figure K).

11) Reverse Steps 1-10 to install a new console mast. **NOTE:** If replacing the right side mast arm, the console cable must be threaded through it prior to it being mounted to the frame.
9.14 CONSOLE CABLE REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the console as outlined in Section 9.12.
3) Take off the cup holder from the right side of the treadmill (Figure A).
4) Use a 6 mm Allen wrench to remove one screw and take off the plastic hand rail (Figure B).

5) Remove the 5 Phillips screws and remove the right side upper plastic cover (Figures C, D, & E).
6) Cut the wire ties and begin to un-thread the wire harness (Figures F & G).

7) Remove the spiral protective wrap from the top and bottom portions of the wire harness (Figures H & I).
8) Attach a pulling wire to the top of the defective console cable (Figure J).
9) Slowly remove the defective console cable starting at the bottom of the machine and pulling it down to the motor compartment (Figure K).

10) Connect the new console cable at the motor tray - 3 connections total. Figures L & M show 2 of these connections, the 3rd is the coax cable.

11) Attach the new console cable to the pulling wire and gently pull the new cable up through the machine. **NOTE:** Once the wire is in place, reinstall the spiral wrap and wire ties.
12) Reverse Steps 1-7 to finish installing a new console cable.
13) Auto Calibration must ALWAYS be run after the installation of a new console cable (see Section 3.4).
9.15 HANDLE BAR SERVICE

1) Turn off power and disconnect the cord from the machine.
2) All items on the handle bar are removed using a Phillips screwdriver from the underside of the bar.
3) Once the screws are removed, lift the part carefully and disconnect any wire connections.
4) Replace parts as needed on handle bar including the Quick Start Key and the Heart Rate Grip Plates (Figures A-F).

FIGURE A

FIGURE B

FIGURE C

FIGURE D

FIGURE E

FIGURE F
9.16 EMERGENCY STOP SWITCH REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the console as outlined in Section 9.12.
3) Use a Phillips screwdriver to remove two screws, one from each side of the red button (Figure A).
4) Lift the button from bracket by pulling one side out at a time (Figure B).

5) Use a Phillips screwdriver to remove two screws, one from each side of the mounting bracket (Figure C).

6) Turn the bracket and use a straight screwdriver or pliers to compress each end of the switch and release it from the bracket (Figures D & E).

7) Reverse Steps 1-6 to install a new emergency stop switch. **NOTE:** Make sure the new switch has the same orientation as the old one when installing, and that the wires are properly connected.
9.17 HEART RATE BOARD REPLACEMENT

1) Turn off power and disconnect the cord from the machine.
2) Remove the console as outlined in Section 9.12.
3) The Heart Rate Board is located in front of the red Emergency Stop button (Figure A).
4) Disconnect the wires from each side of the Heart Rate Board (Figure B).

5) Use a Phillips screwdriver to remove two screws, one from each side of the Heart Rate Board mounting bracket (Figure C).

6) Reverse Steps 1-5 to install a new heart rate board. **NOTE:** Be sure to fully seat the wires on the new heart rate board and test the grips after the console is reinstalled.
9.18 BLOWER MOTOR REMOVAL

1) Turn off power and disconnect the cord from the machine.
2) Remove the console as outlined in Section 9.12.
3) Lay the console face down and remove the four screws using a Phillips screwdriver (Figure A).
4) The console shell will now separate. Use a Phillips screwdriver to remove the two screws holding the blower motor in place (Figure B).

5) Carefully separate the blower motor from the duct and remove it (Figure C).
6) Unplug the wire connections from the main circuit board to completely split the front and rear sections (Figure D).

7) Reverse Steps 1-6 to install a new blower motor. **NOTE:** Be sure to test the blower motor once the console is reinstalled.
9.19 OVERLAY REPLACEMENT

**NOTE:** The instructions below are for console overlays / keypads replacement, but the procedure is the same regardless of where the overlay / keypad.

1) Turn off power and disconnect the cord from the machine.
2) Remove the console as outlined in Section 9.12.
3) Remove the back cover of the console (Figure A).
4) Unplug and remove the faulty overlay (Figure B).

5) Clean the console area with alcohol to remove any left over adhesive (Figure C).

6) Remove the protective film over the display window of the overlay (Figure D).
7) Peel part of the protective film from the back of the overlay (Figure E).
9.19 OVERLAY REPLACEMENT - CONTINUED

8) Push the overlay ribbon cable through the hole in the console and plug it in (Figure F).
9) Match the overlay to the cutout on the console (Figure G).

![Figure F](image1)

![Figure G](image2)

10) Press down on the corners of the overlay to keep it in place, then remove the protective film (Figure H & I).

![Figure H](image3)

![Figure I](image4)

11) Once the overlay is in the correct position, press down on the overlay with a cloth to adhere it to the console plastic (Figure J).

![Figure J](image5)

12) Use the same procedure to replace any additional faulty overlays. **NOTE:** Overlays can not be reused.

</table>
ATTENTION
After assembly and installation is complete, the treadmill will need to be calibrated using the auto-calibration procedure outlined in Section 3.4. DO NOT stand on the belt while the auto-calibration sequence is in progress.

Prior to assembling the treadmill, unpack all of the contents of the box and make sure that all necessary components are present. Review the contents of the hardware package for completeness. Contact Matrix customer service at 866.693.4863 to report any missing items.

ASSEMBLY INSTRUCTIONS
Please make sure that the power cord is not plugged into the wall outlet while completing the following procedure.
To ensure correct assembly of the treadmill, carefully read and follow these steps:

STEP 1
Remove the motor cover(s) and set aside. The motor cover(s) need to be removed to gain access to the motor compartment so that wire harness connections can occur.

STEP 2
Open Black Assembly Bag. Assemble both the left and right console masts to the treadmill base using item 10 socket head cap screw and item 14 washer. Thread the console cable through the right console mast as you attach it.
Open White Assembly Bag. Assemble the left and right bracket (items 20 and 21) to the console base using item 12 socket head cap screw, item 14 flat washer and item 11 socket head cap screw.

Assembly Tip: It is much easier to accomplish this task if the console base is left inside its shipping container.

Open Blue Assembly Bag. Slide the urethane arms over the steel tubes on the console base. Fasten the urethane arms to the steel tubes using item 17 socket head cap screw and item 19 spacer.
Open Red Assembly Bag. Assemble the console base to the console masts using item 15 button head cap screw and item 14 flat washer. Be sure to route the console cables down the console mast through the larger opening in the mast which is closest to the running belt. Make all appropriate wire connections within the motor compartment.

Open Yellow Assembly Bag. Make appropriate wire connections to the faceplate and then assemble to the console base using item 13 socket head cap screw, item 23 lock washers, and item 16 socket head cap screw. Item 16 is a shorter socket head cap screw and gets assembled into the holes closest to the running surface. All holes applicable to the assembly step can be noted by the embossed arrow next to the hole. See pages 69-70 for detailed instructions on wire connections.
Replace the motor cover(s) and power the treadmill on. The power button is located next to the power cord inlet.

**ASSEMBLY COMPLETE**

Assembly is complete, the running belt should be adjusted as needed and the auto calibration sequence must now be run as outlined in Sections 3.4 and 3.5. Also level the unit as outlined in Section 10.4.
10.4 LEVELING THE TREADMILL

OPTIONAL LEVELING ASSEMBLY TECHNIQUES: USE OF SHIM OR BY ADDING A LEVELING FOOT.

Note: It is extremely important that the levelers are correctly adjusted for proper operation. An unbalanced unit may cause belt misalignment or other issues. Use of a level is recommended.

Remove the leveling shim provided on the underside of the treadmill. The shim can be found mounted on the underside of the right hand side rail. Remove the rear foot on the side of the treadmill that is resting low. Install the shim as shown above and return the rear foot.

When installing the optional rear leveling foot accessory, remove the existing rear foot. Replace with new leveling foot and fasten to the frame using the existing fasteners that held in the half-moon foot.
10.5 MYE TV BRACKET INSTALLATION INSTRUCTIONS

The Matrix Treadmill is capable of having a MYE Entertainment or Web Ready (PCTV) television installed using an integrated bracket. Follow the instructions below to install the MYE TV and TV bracket and Section 10.6 for installation of a PCTV with a bracket, then use the instructions located in the TV owner's manual to program the TV. **NOTE:** Both the MYE TV and PCTV use the same bracket kit, which means that there will be unused wiring depending on which type of TV is being installed.

1) Remove the 4 screws holding the console back cover to the front and remove the console back cover (Figures A & B).

2) Use a razor to remove the heart rate overlay from the lower portion of the console (Figure C).

3) Clean the console area with alcohol to remove any left over adhesive from the overlay (Figure D).

4) Peel the protective film off of the new entertainment keypad (Figure E).

5) Slide the ribbon cable of the new entertainment keypad through the slot in the console plastic (Figure F).
6) Stick the keypad to the cutout in the console plastic and press down to completely adhere the keypad to the plastic (Figure G).
7) Peel the protective film from the back of the entertainment overlay (Figure H).

8) Stick the overlay to the cutout in the console plastic and press down to completely adhere the overlay to the plastic and keypad (Figure I).
9) Plug the keypad ribbon cable into the open pins on the UCB (Figure J). **NOTE:** Make sure that all pins are engaged by the ribbon cable.

10) Slide the TV bracket between the console frame and the fan frame (Figure K).
11) Secure the TV bracket to the console using the 4 socket head screws sent with the bracket kit (Figure L).
10. MYE TV BRACKET INSTALLATION INSTRUCTIONS - CONTINUED

12) Attach the coax cable from the TV bracket kit to the coax cable coming up the console mast (Figure M). **NOTE:** There is an adaptor to hook the 2 male coax cable ends together included with the TV bracket kit.

13) Attach the 4 pin black connector side of the power wire to the TV POWER FOR EP port on the UCB (Figure N).

14) Plug the side of the controller wire marked TO CONSOLE into the TV port of the CSafe board in the console (Figure O).

15) Mount the front plate to the MYE TV using 2 screws sent with the TV bracket kit (Figure P).

16) Mount the TV to the bracket using 4 screws (Figure Q). **NOTE:** Make sure the tabs of the front plate slide behind the console faceplate to create a seamless look (Figure R).
17) Plug the coax cable into the port on the MYE TV (Figure S).
18) Plug the power wire into the port on the MYE TV (Figure T).
19) Plug the controller wire into the port on the MYE TV (Figure U).
20) Install the console back cover using the 4 screws removed in Step 1 (Figure V). **NOTE:** Make sure to route the wiring through the holes in the back cover so that none of the wiring is pinched (Figure W). The MATRIX logo portion of the back cover will not be used with a TV bracket.
21) Install the TV back cover using 4 screws (Figure X).

22) A coax cable with a signal strength of 10 Hz should be run to the treadmill and plugged in next to the power cord.
23) Enter into Engineering Mode and set the Audio Source setting to TV.
24) A channel scan should be done using the instructions included in the TV owner’s manual.
10.6 PCTV TV BRACKET INSTALLATION INSTRUCTIONS

**NOTE:** Section 10.6 is for installation of a TV bracket with a PCTV (web ready). See Section 10.5 if installing a MYE TV.

1) Remove the 4 screws holding the console back cover to the front and remove the console back cover (Figures A & B).

2) Slide the TV bracket between the console frame and the fan frame (Figure C).

3) Secure the TV bracket to the console using the 4 socket head screws sent with the bracket kit (Figure D).

4) Attach the coax cable from the TV bracket kit to the coax cable coming up the console mast (Figure E). **NOTE:** There is an adaptor to hook the 2 male coax cable ends together included with the TV bracket kit.

5) Attach the 4 pin black connector side of the power wire to the TV power wire coming up the console mast (Figure F).
6) Plug the controller wire (this will have a white RJ45 connector on one end) into the bottom left hand corner of the UCB (Figure G). **NOTE:** There is a wire in this location that will need to be removed to plug in the controller wire.

7) Plug the net wire (this will have a yellow RJ45 connector on one end) into the net wire coming up the console mast (Figure H). **NOTE:** The net wire is only needed if wired internet will be used.

8) Mount the front plate to the MYE TV using 2 screws sent with the TV bracket kit (Figure I).

9) Plug the coax cable into the port on the PCTV (Figure J).

10) Plug the TV power wire into the port on the PCTV (Figure K).

11) Plug the controller wire into the port marked PCTV on the PCTV (Figure L).
12) Plug the net wire into the Net port on the PCTV if wired internet will be used (Figure M).

13) If wireless internet will be used, plug the dongle into the port of the PCTV (Figure N), and mount the dongle to the PCTV plastic using double sided foam tape.

14) Mount the PCTV to the bracket using 4 screws (Figure O). **NOTE:** Make sure the tabs of the front plate slide behind the console faceplate to create a seamless look (Figure P).

15) Install the console back cover using the 4 screws removed in Step 1 (Figure Q). **NOTE:** Make sure to route the wiring through the holes in the back cover so that none of the wiring is pinched (Figure R). The MATRIX logo portion of the back cover will not be used with a TV bracket.
16) Install the TV back cover using 4 screws (Figure S).
17) Plug the PCTV power wire into the port on the front of the treadmill near the power switch (Figure T).

18) Plug a coax cable with a signal strength of 10 Hz into the front of the treadmill near the power cord (Figure U).
19) If using wired internet, plug a net wire into the port on the front of the treadmill near the power switch (Figure V).

20) Enter into Engineering Mode and set the Audio Source to PCTV.
21) A channel scan should be done using the instructions included in the TV owner's manual.
11.1 SOFTWARE UPGRADE PROCEDURE

1. Create an access on USB folders which will be used. The access should be MATRIX\FW\UCB (create a folder called MATRIX, then a folder in MATRIX called FW, then a folder in FW called UCB). Or you can put USB in console and press ENTER, 9, 0, 0, 1, ENTER on the keypad and the USB will get the access. (Figure A)

2. Copy the software files into the UCB folder on the USB drive (the access should read \MATRIX\FW\UCB - Figure B).

3. Insert the USB drive into the USB port on the console (Figure C).

4. When the display is in standard condition, press ENTER, 9, 0, 0, 1, ENTER on the keypad. Press the LEVEL UP or DOWN keys to choose the correct software (if there are more than one versions on the USB drive). Once the correct software is found, press ENTER and the upgrade procedure will start.

5. If the console beeps and the standard display picture comes back up (Figure D), please remove the USB drive.
